## PROJECTS

### STUDENT MANAGEMENT SYSTEM

In this project I was a team leader and in my group we are 4 members and we divide a topics and my topic is creating a web page by using Html and another 3 member done their topic like 2 member topic is creating a php script & another 3 member topic is creating a css script then we install a xampp server to execute the code.

we created a database to store data directly in database,finally we created "STUDENT MANAGEMENT SYSTEM", we got a result and taking screenshot of that result and report is done based on the project and we paste the result also and it helps our department to store a student information like student data, personal details of student, attendance, marks of the student, this was my project details.

### POLICE NETWORKING SYSTEM

In this project we are visited police department SP office to observe how they managing network what type of software they use and how they track criminals and what type of server they use all we noted police department use private network.

The police IT software to tracking criminals and Kaspersky Security for Windows Server they use and we take a pictures and individual person have to make a report and my topics is CDR (call detail record) it is to call detail tracked by police of criminal which is stored in database by using police IT software and I made a report on that and submitted to our teacher.

## INTERNSHIP

I happy to say I was internship with this company and I learn how to develop a web page and they teach how to write a program and how to detect a errors and how to solve the errors, they give me a activity to generate hospital management system & I search information and we also get a E R diagram of hospital management system and then we written a code then that code executed in xampp server using this we made simple code like entry of patient information and what type of disease they have and how much patients are admitted in hospital and how much money they have paid to the hospital & pending amount all in information are stored in oracle mysql database and we get information in the database it is easy to backup and maintain a records of the patient, then all report has done we taken a print out of the project this project is received by company then Company given a certificate called "ADVANCE TECHNOLOGY IN WEB DEVELOPMENT", we had a good experience to internship with this company.
